

### ANIMALS IN RESEARCH PANEL

## From Animal Studies to Human Treatment: The Role of Animal Models in Neuroscience Discoveries

Monday, November 17  
10–11:30 a.m. PST  
Convention Center Room 16

Animal models have played a vital role in driving global progress in neuroscience, particularly in understanding brain function and laying the groundwork for cutting-edge treatments. Join clinical researchers, patients, and international leaders as they discuss the evolution of deep brain stimulation in shaping therapies for psychiatric illnesses and the importance of collaborative, cross-border work with animal research in bringing these life-changing treatments to reality.

**Moderator**  
David Q. Beversdorf, MD

**Panelist**  
Helen Mayberg, MD
